# Day 4 Activity Summary

n Day 4, I focused on creating dynamic frontend components using Sanity CMS and APIs.
mphasizing modular design and state management techniques for efficient data handling. I also
rked on implementing responsive design and following UX/UI best practices, preparing myself
real-world client projects with professional workflows.

New Arrivals

the 'New Arrivals' section, I utilized Groq queries to fetch real-time product data from Sanity
S. This enabled me to display newly added items with their images, descriptions, and prices in a
an, user-friendly format, ensuring a seamless browsing experience.
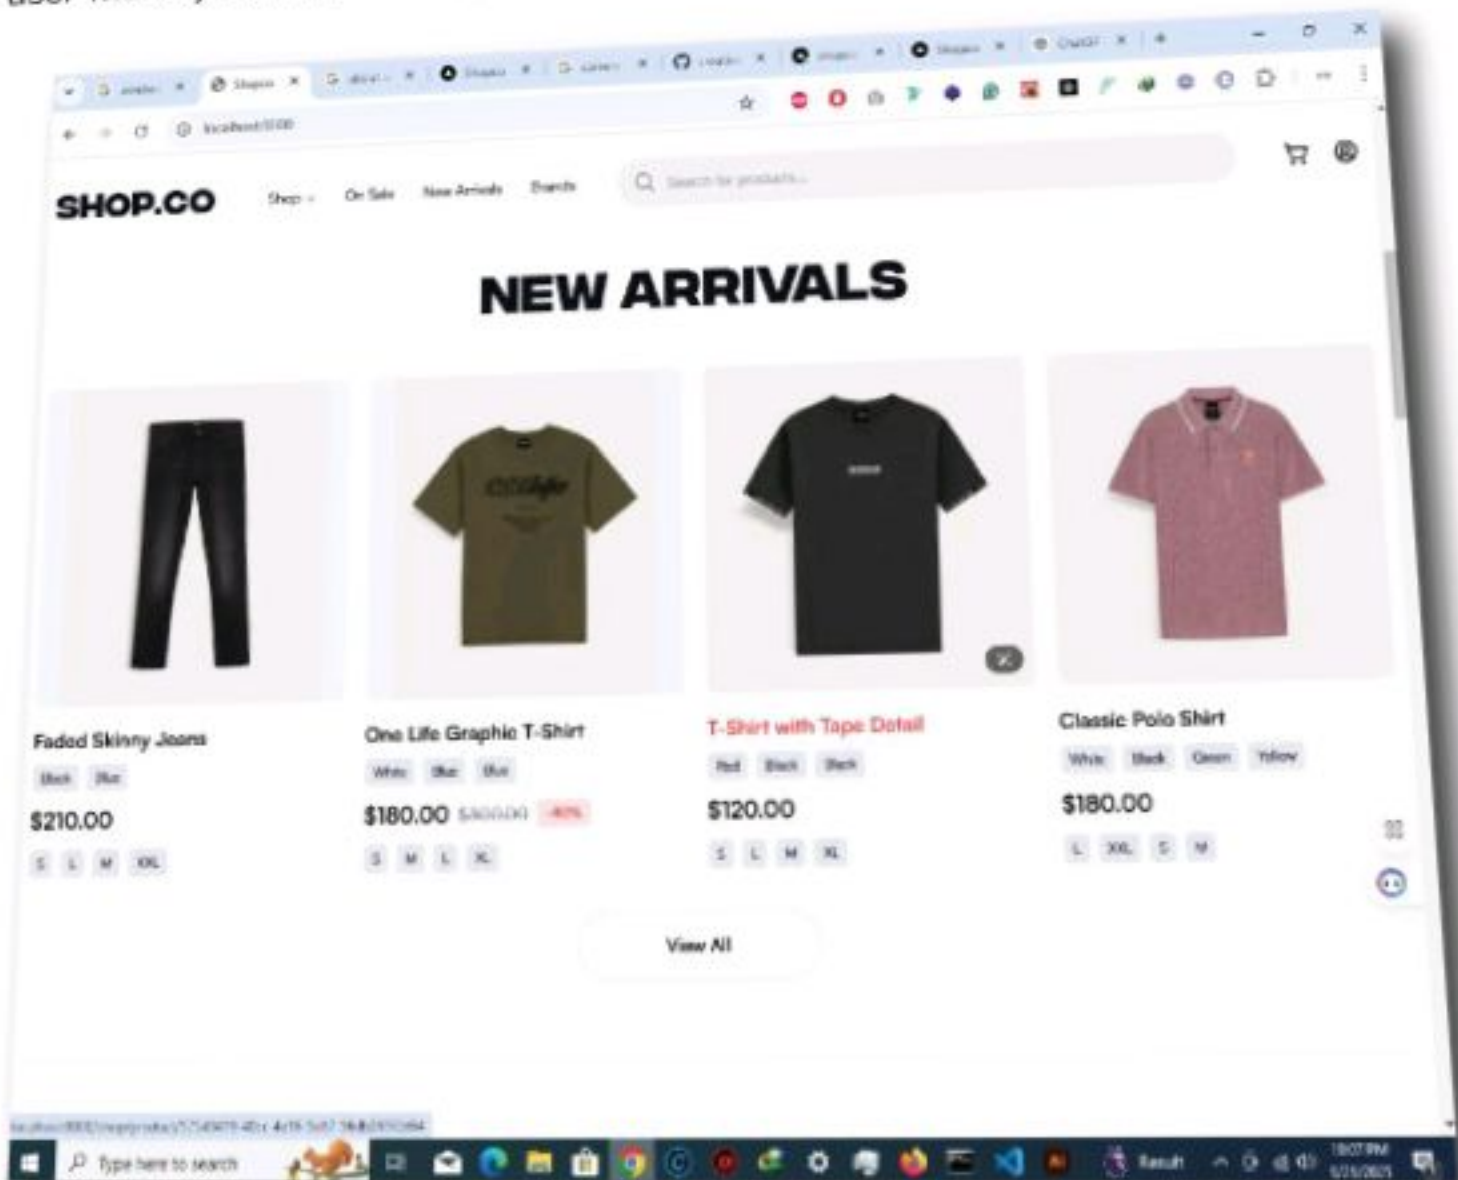

Top Selling

For the "Top Selling" section, I utilized Groq queries to dynamically retrieve best-selling products from Sanity CMS. This allowed me to present popular items with their images, descriptions, and prices in an engaging and organized layout, enhancing the overall shopping experience.
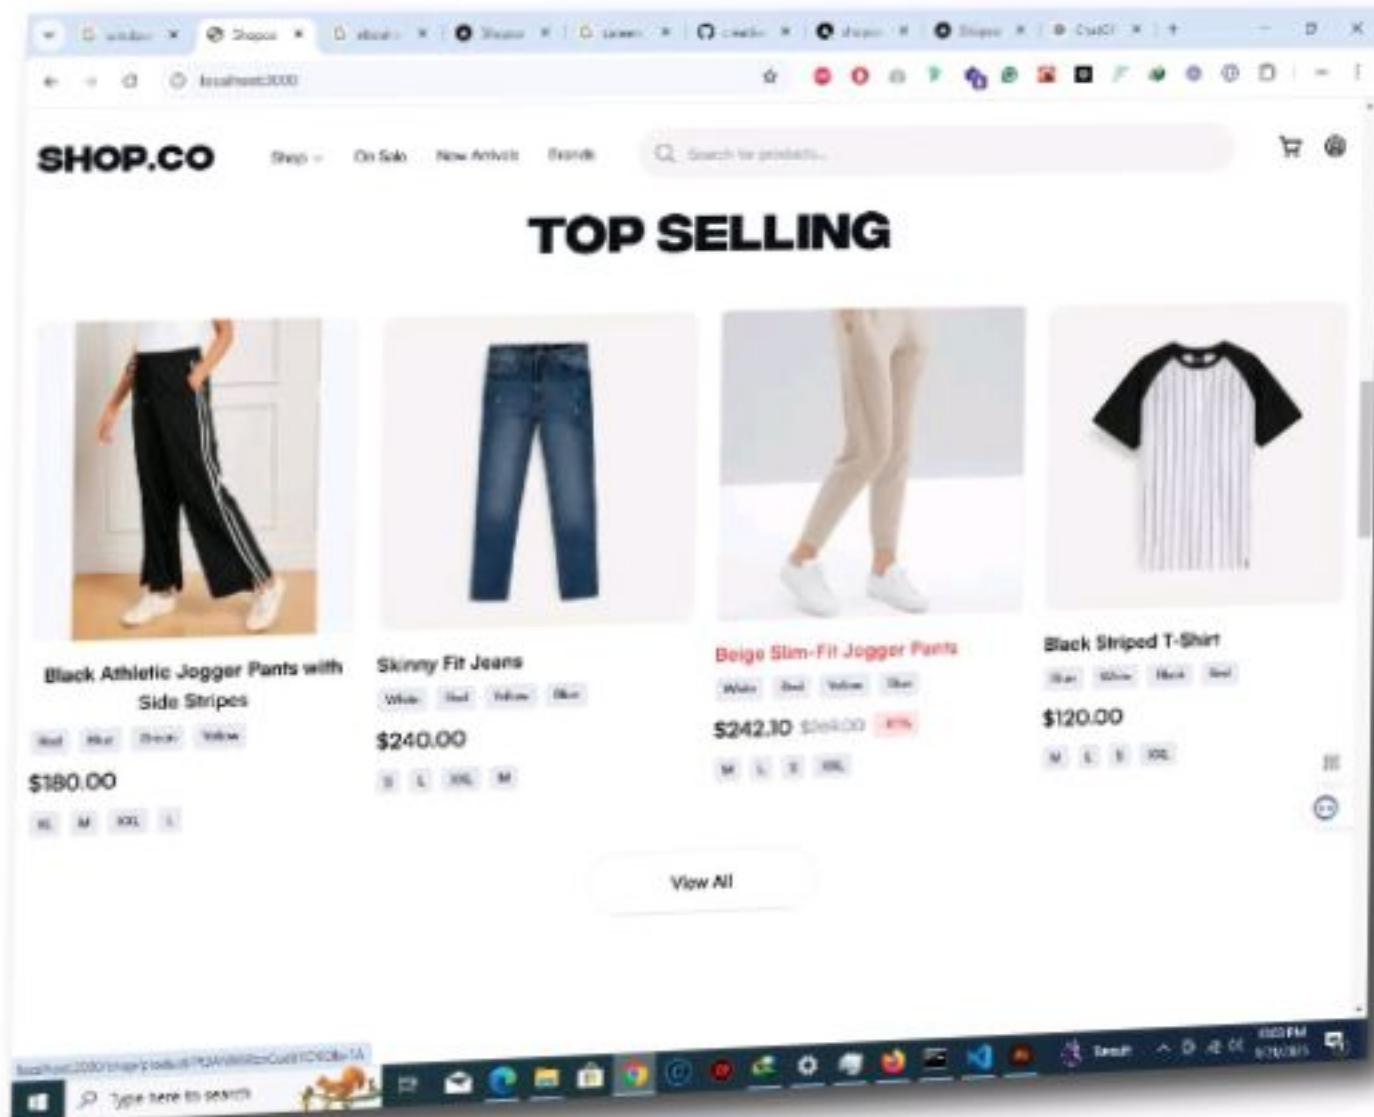

Top Brand:

I created a custom Top Brands component to showcase renowned brands dynamically fetched from Sanity CMS. By using Groq queries, I displayed brand logos, descriptions, and their featured from Sanity CMS. By using Groq queries, I displayed brand logos, descriptions, and their featured ... This component ensures seamless updates and adds a
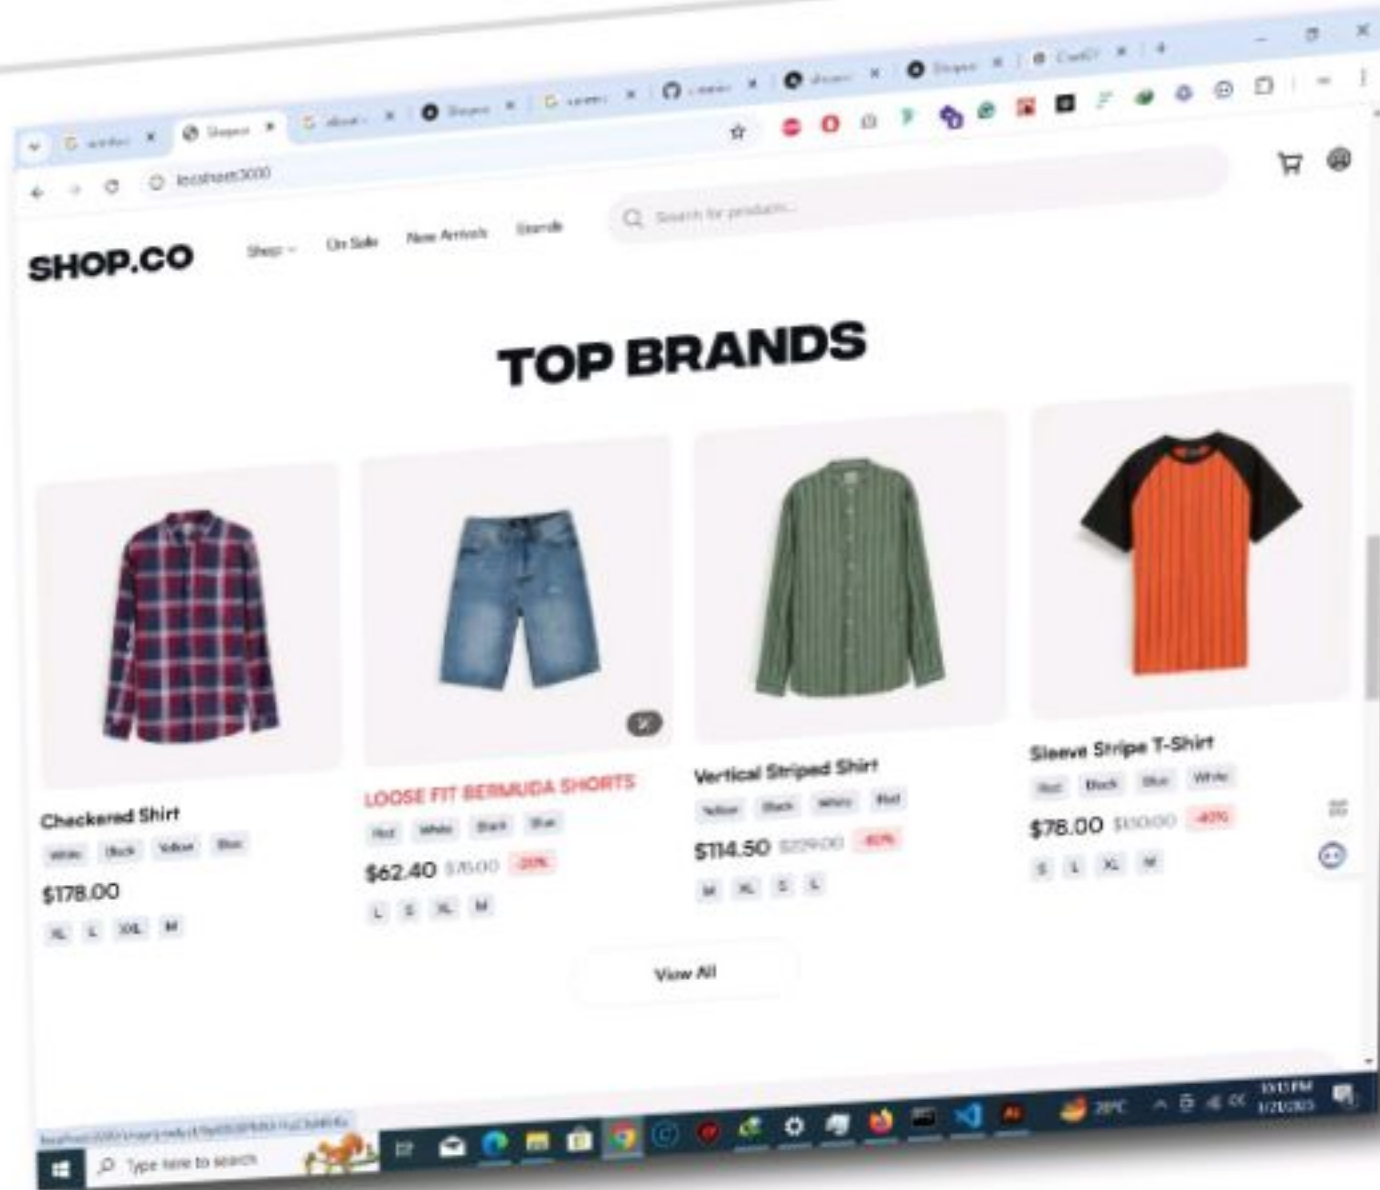

Newsletter:

updated the Newsletter Subscription component to make it more interactive and functional. By incorporating an intuitive design and integrating it with the backend, users can now easily subscribe for updates. This enhancement ensures efficient data capture and aligns with modern UX practices, making the component both engaging and impactful.

Crafting Dynamic Frontend Experiences with Sanity CMS (SHOP.CO)

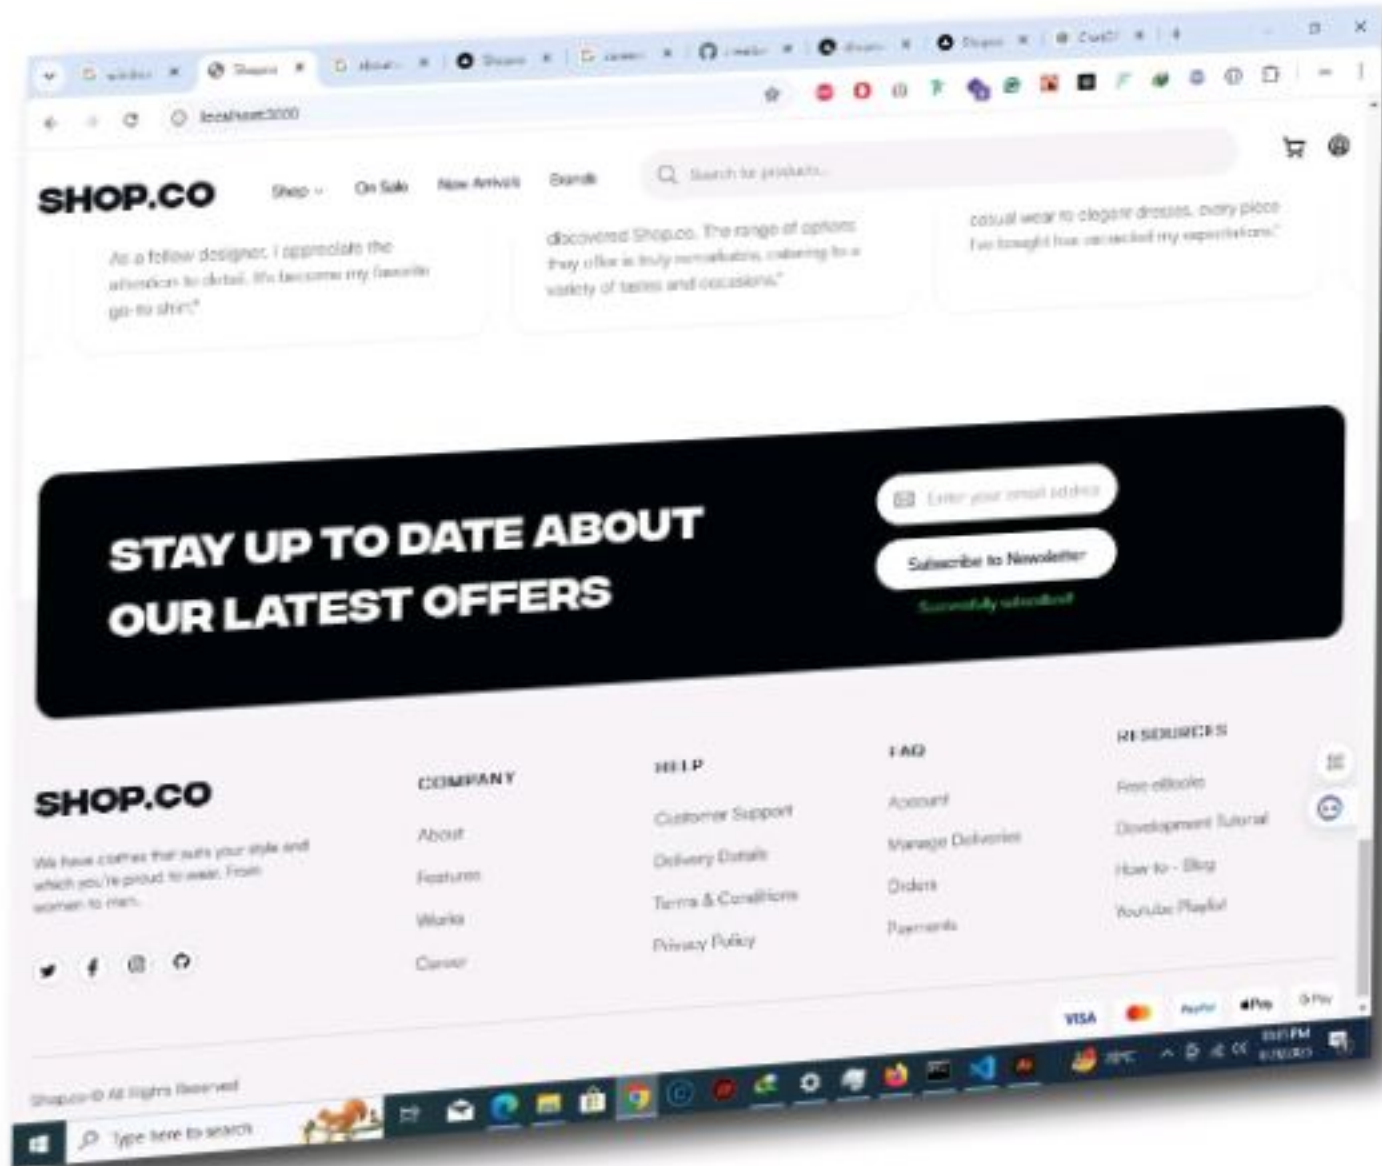

Updating On Sale Product:

For the On Sale section, I implemented a dynamic component that displays all products fetched from Sanity CMS. Using Groq queries, I ensured that the products, along with their sale prices, descriptions, and images, are displayed in an organized and engaging format. This approach provides a user-friendly shopping experience.

Update Product Card Details:

I updated the Product Card Details functionality to provide a seamless and interactive shopping experience. Now, when users click on a product, they are directed to its detailed product page. The page dynamically fetches and displays product-specific information, including images, descriptions, and pricing, directly from Sanity. This enhancement ensures users can explore product details effortlessly and make informed decisions.
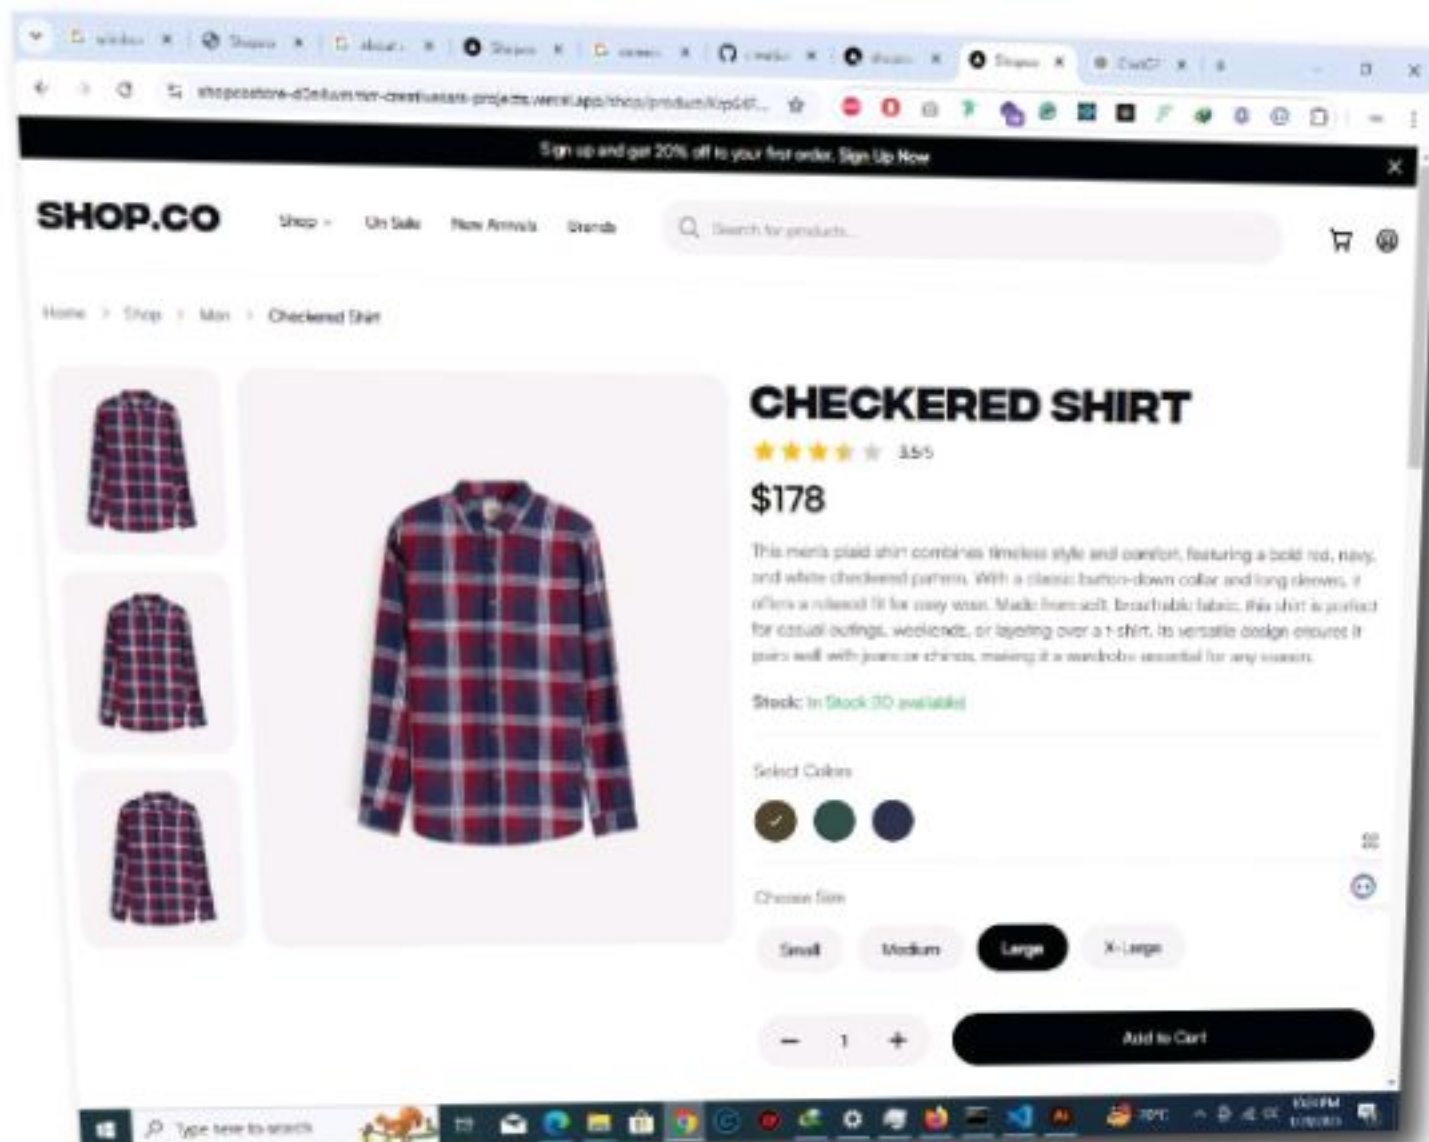

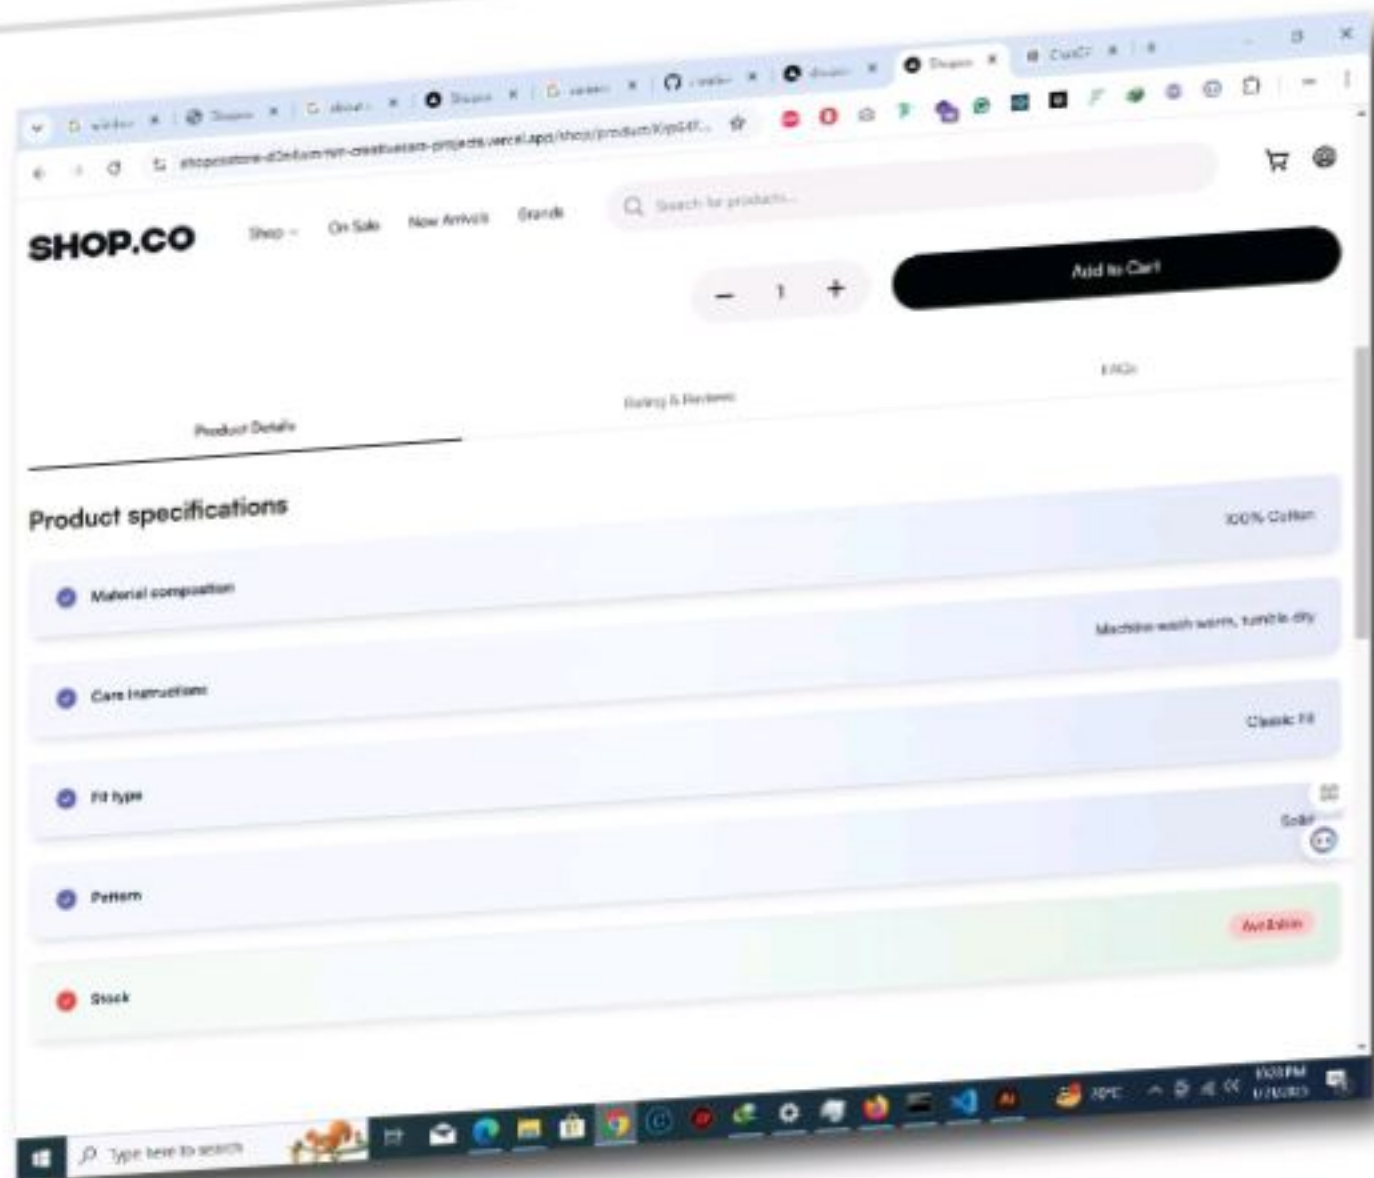

Update Proudct Details Tabs

I updated the Product Card Details functionality to provide a seamless and interactive shopping experience. Now, when users click on a product, they are directed to its detailed product page. The page dynamically fetches and displays product-specific information, including images, descriptions, and pricing. This enhancement ensures users can explore product details effortlessly and make informed decisions.
